EXPERIENCE

Jet Propulsion Laboratory, California Institute of Technology

August 2012 - present

Applications Software Engineer

Pasadena, CA

- Architected data systems with Tableau Web Data Connectors and Express for dashboards to explore aggregated data and event anomalies flagged by rules-engine, Event Verification Records & Engineering Housekeeping, and Accountability data.
- Using Matlab, determined optimal decisional passes for telecom ground operations based on data volumes and pass schedules. Developed web GUI to generate and display Earth ground team schedules corresponding with decisional passes.
- Designed framework for Link Complexity and Maintenance software to query events or trends from Sequence of Events files and estimate a link complexity profile.
- Telecom forecast prediction tools for various deep space missions, including full web stack development for SaaS application prototype. Spacecraft, planetary, camera-matrix, and events analysis using C/C++. Implementation of network link models. UX development with Liferay portlets and Drupal, data visualization with D3 & WebGL.
- Python implementation of Markov model for estimating bandwidth requirements in Deep Space Network simulations. Modeling of communications traffic flow for human exploration of Mars & Moon.
- Radio science operator for Cassini Spacecraft. Investigation of atmospheric losses for 32GHz radio communications recorded on Deep Space Network open & closed loop receivers. Using AWS Redshift implemented data warehouse and plots for radio science data from Cassini Spacecraft during 2004-2015.

Spectral Imaging Laboratory

November 2011 - present

Consultant

Pasadena, CA

- Post-processing algorithm to correct for manufacturing inconsistencies in prototype of artificial compound eye.
- Application of super resolution algorithms to ray-traced simulations of images captured with artificial compound eyes. Using Matlab and openCV, improved resolution of images degraded with noise models.
- Modeling of visual acuity for multiple apertures on curved surface. Implementation of neural networks to improve angular resolution of a point light source.

California State University, Fullerton

December 2009 - August 2012

Research Assistant & Intern

Fullerton, CA

- Designed and implemented framework to improve run-time efficiency & accuracy of cancer detection using eigen decomposition of DNA microarray data with large feature set.
- Implementation of next generation sequencing alignment techniques for discovering binding sites in heat-shock proteins, including C/C++ implementation of self-organizing maps.
- Delivered scheduling tool for library resources using .NET framework. C# student web application, VB.NET admin configuration tool. Database design & implementation using SQL Server & stored procedures.

EXTRACURRICULAR, VOLUNTEER & PROFESSIONAL AFFILIATIONS

Interplanetary Small Satellite Conference Organizing Committee; Caltech Alpine Club Website Administrator; Private Pilot-ASEL +300hrs in PA28, C152, C172; Technician Class Amateur Radio Operator

2010 - 2012 Vice-President of Association for Computing Machinery, CSU Fullerton.

AWARDS & HONORS

2013 1st place Biotech Track, 15th Annual IEEE Biomedical Engineering Biotech Contest.

2012 Anita Borg Scholarship, CSUPERB Travel Grant, Orange County Outstanding Engineering Student Award.

EDUCATION

California State University, Fullerton

M.S. in Computer Science

August 2012

B.S. in Computer Science, Minor in Mathematics

July 2011
